

← **JOHN CULLEN LIGHTING**

Introducing John Cullen Lighting’s range of 50+ LED engines which help you achieve extra punch in double height ceilings or where you need a greater intensity of light. The downlight shines up to 1150 lumens with an intensity of 6893 Candelas. Available in 13°, 22° and 38° beam widths, the light has a very high CRI of over 95 (red R9 value of over 85) to enhance the colours in your scheme. The 50+ engine contains a tool-less optic for easy lens changing when commissioning. For use with our 69mm downlights: Polespring, Mira, Flush, Waterspring and Square downlights.

↑ **ASTRO LIGHTING**

A new addition to Astro’s comprehensive range of bathroom spotlights is the Aqua collection. Designed to complement any bathroom scheme, Aqua is an uncomplicated, minimalist design available in either polished chrome or matt white finishes and offered as a single, triple round or three bar option. A tilt adjustment angle of 90degrees and a rotation adjustment angle of 330degrees allows fully directional light for just where it is needed. Aqua is designed for use with a 6W LED GU10 lamp, is IP44-rated and can be either ceiling or wall mounted depending on desired lighting requirement.

→ **TERENCE WOODGATE**

The Solid Table Light from lighting brand Terence Woodgate features a pure, cylindrical base topped by a hand-blown, acid-etched, opal glass shade. There are two sizes, with the Solid Table Light - Small retaining the same design and proportions but at two-thirds of the size. Both sizes are available with a base of either Carrara or Nero Marquina marble with ‘Serpentine Green’, a dark green marble, a further option in the small version. The table lights form part of the Solid collection that includes pendants and surface-mounted downlights in a range of natural materials. [terencewoodgate.com](http://terencewoodgate.com)

← **FUTURE DESIGNS**

Lantern is a unique ultra flexible bespoke lighting system designed by FUTURE Designs. The design incorporates a series of illuminated cubes which can be configured differently to create varying scenes throughout the kelvin range and is a stunning focal point to this interior. Lantern has a number of technical challenges including the varying sizes and depths of the handmade cubes meaning that each different unit requires its own bespoke board arrangement customised and programmed separately to offer total autonomy. This also guarantees every segment, whatever the size or dimension is identically illuminated. [futuredesigns.co.uk](http://futuredesigns.co.uk)

↑ **FIBRE OPTIC FX LTD**

Bespoke lighting solutions from Fibre Optic FX Ltd. Specialising in the design, manufacture and installation of fibre optic and LED lighting. Recently used to highlight the newly constructed Tower Bridge glass floor situated 42 metres above the River Thames. Stretching 11 metres in length and 1.8 metres wide led’s in RGBW were encased into the 530kg glass floor picture framing the high level walkway with vivid colour.
