

← TERENCE WOODGATE

The Solid Table Light from lighting brand Terence Woodgate features a pure, cylindrical base topped by a hand-blown, acid-etched, opal glass shade. The light is available in two sizes, with the classic Solid Table Light offered with a base of either Carrara or Nero Marquina marble. The recently-launched Solid Table Light - Small, retains the same design and proportions but at two-thirds of the size. The smaller version is also available in Carrara or Nero Marquina, as well as a dark green marble option, 'Serpentine Green'. A four-stage touch dimming button allows for easy matching of light levels in environments where multiple pieces are used. The Solid Table Light uses highly-efficient factory replaceable multiple warm white (3000kelvin) LEDs by Philips and is available with Type A, C, G or I plug heads. terencewoodgate.com

↑ FUTURE DESIGNS

SKYLINE by FUTURE Designs is as impressive as it is practical. Designed to not just illuminate but house all modern cable systems and incorporate schemes such as downlighter modules, PIR and voice evacuation systems. Its unique engineered design includes specially crafted junction sections, which ensure LV and ELV cables do not cross. Engineered modules allow for seamless joins and flexibility in the design. SKYLINE can be designed to follow staircase structures and architectural details as well as providing excellent lighting to the working environment. futuredesigns.co.uk

→ WILA

The filigree pendant Downlight family "SIRO" provides the perfect quality of light for performing accent lighting tasks. Lean design with built-in ballast and versatile colour combinations integrate into any type of architecture. The direct/indirect light emission from SIRO luminaires can be switched separately. With CRI 98 and CRI 83 and 1x2SDCM the light quality produces perfect lighting results and a harmonious overall look. The lights are glare-free and with UGR 19, 65° <math><1000\text{ cd/m}^2</math> suitable for VDU workstations. Up/Downlight, the cylindrical surface or pendant luminaires offer the ideal solution for concrete ceilings or ceiling restrictions. wila.com

↑ JOHN CULLEN LIGHTING

Our much loved range of high-end downlights have just become that bit easier to specify with two new additions, a fire rated accessory and a twist and lock system. Both will save your electrician time, reducing installation costs for you and your clients. The fire accessory is ideal when fire rating is required for both new builds and refurbishments alike and will maintain a period of fire resistance of 60 minutes as per Building Regulation requirements. We have also introduced a unique new twist and lock system which will enable the LED engine to be installed in the downlight without the need for a screwdriver. johncullenlighting.com

← ASTRO LIGHTING

Astro are proud to announce that the Edge Reader wall light has won its second award this year; the German Design Award 2018, a world-renowned design accolade, presented by the German Design Council. Every year new and innovative products are discovered and presented with the award which are each, in their own way, ground-breaking in the design industry. Also winner of the Red Dot Product Design award earlier this year, the Edge Reader combines ambient lighting with the directional functionality of an LED reading light. The minimalist architectural structure enables the light to blend into the room even when not in use. astrolighting.com
